BRED Bank / Lyra PayZen — Setup Sheet

For: Saviera "Savi" Alexis — owner, Ace Tours & Transfers
Prepared by: Mark, website developer · 10 November 2026 (updated 11 November 2026)
Bank contact: Michael Dan, BRED (Vanuatu) Ltd, E-Banking — `mdan@bred.vu`

> **Safe to share with BRED.** This page contains no passwords, secret keys or customer data.

> **The short version**
>
> 1. Give BRED the settings in **§2**.
> 2. Ask BRED for the items in **§3**.
> 3. When BRED sends the details, enter them in the website using **§4**.
>
> If BRED asks for a **"notification URL"** (they may call it **"IPN"**), copy the address from §2 — or from the **Copy** button in Admin → Payments → BRED Bank → Configure. You do not need to understand it: it is a setting the bank stores, not a link you open.

---

1. Who does what

Person	Role in this setup
Savi (`acetoursvanuatu@outlook.com`)	Merchant-account holder and owner. Sends/receives the emails and enters the PRODUCTION key in the website (see §6).
Mark (`markmal64@gmail.com`)	Website developer and the **technical contact** for the PayZen integration. Sets the notification URL and runs the TEST payment.
Michael Dan (`mdan@bred.vu`)	BRED E-Banking Merchant Officer. Sends the Shop ID, TEST key, production-key process and shop configuration.
John Lew (`john@pacificbedbank.com`)	Bedbank contact. **Not** the website developer and not the PayZen integrator — he does not need website files.

> BRED's "Technical Contact Details" on the e-commerce application should name **Mark**, not John. If it says John, ask Michael Dan to correct it.

---

2. Give these settings to BRED

Copy the table below into BRED's form or email. The notification URL must be copied **exactly** — lower-case, no spaces, no full stop at the end.

Setting	Value to give BRED
Business	Ace Tours & Transfers Vanuatu — `https://acetoursvanuatu.com`
Merchant-account holder	Saviera "Savi" Alexis
Technical contact	Mark — `markmal64@gmail.com`
Integration	Lyra PayZen **hosted payment page** (signed form). Card numbers are entered on PayZen's page, never on our website.

Setting	Value to give BRED
Notification URL (BRED may say "**IPN**")	`https://acetoursvanuatu.com/api/payments/webhook/bred-bank`
Notification when a payment is cancelled or abandoned (PayZen usually lists it as *"Instant Payment Notification URL on cancellation"*)	**Turned on**, sent to the same notification URL above
Return / redirect URL (only if the form requires one)	**No fixed value** — the website sends it with each payment. If a box must be filled, use `https://acetoursvanuatu.com/` as a placeholder.
Signature algorithm	**HMAC-SHA-256**
Currency	**VUV** — whole vatu, no cents (VT 5,000 is sent as `5000`)
Capture	Same-day, automatic (no per-payment manual approval)
3-D Secure	Enabled
Refunds	Made in the PayZen Back Office by us; the website records them
Website files / repository access	**Not needed** — the integration is already built

Same address for TEST and PRODUCTION. Use the one notification URL for both shops. The website checks which shop (TEST or PRODUCTION) sent the result and rejects a test result that arrives while the shop is in production mode — so there is no second address to get wrong.

Why the cancelled/abandoned notification matters. By default PayZen only tells the website about payments that were paid or refused. If a customer opens the payment page and then cancels or closes it, the website hears nothing, so the booking waits and you receive a *"payment needs review"* email for a payment that was never made. With this notification turned on, the website is told straight away and simply closes that attempt.

If the bank's form asks for a "return", "redirect" or "success" URL: there is **no fixed value to give BRED**. The website sends the return address with every payment because it has to carry the booking reference (`/payment/success?booking=…`), so a single address would not work. If the form insists on a value, put `https://acetoursvanuatu.com/` as a placeholder and add the note *"the website supplies the actual return address on each payment."* Do **not** use `/payment/success` — without the booking reference that page has no booking to show and looks like a blank/pending success.

---

3. Ask BRED for these

Tick these off as BRED provides them:

- ☐ **Merchant account** for online card payments, in the business name, settling to our BRED account.
- ☐ **PayZen Back Office access** — one user for Savi (owner) and a separate user for Mark (developer).
- ☐ The **8-digit Shop ID** (it is a number like `12345678`).
- ☐ The **TEST key** (visible in the Back Office), and how/when the **PRODUCTION key** is issued.
- ☐ **VUV enabled** on the shop, and confirmation that whole-vatu amounts are accepted.
- ☐ Confirmation of the **payment page address**: the standard `https://secure.payzen.eu/vads-payment/`, or a BRED-specific one.
- ☐ **HMAC-SHA-256** selected as the signature algorithm.
- ☐ **Same-day automatic capture** (no manual validation per payment).
- ☐ **3-D Secure enabled.**
- ☐ **Notification (IPN) URL** set for **both** TEST and PRODUCTION, with **automatic retry** if our site is momentarily down.

- ☐ **Notification for cancelled and abandoned payments turned on**, to the same notification URL, for **both** TEST and PRODUCTION.
- ☐ **Test card numbers** — and how many test payments are needed before the production key is issued.
- ☐ **Fees** (per transaction and monthly), settlement timing, and how refunds are handled.

---

4. When BRED sends the details — enter them in the website

You need to be logged in as an **admin**.

1. Open **Admin** → **Payments**, find the **BRED Bank** card and click **Configure**.
2. Fill the fields:

Field	What to enter
Shop Id	The **8-digit** Shop ID from the Back Office (digits only — e.g. `12345678`)
Mode	Choose **TEST** first (it is a dropdown: TEST or PRODUCTION)
Test Key	The TEST key from the Back Office — paste it, do not retype it
Production Key	Leave **empty** until BRED issues the production key
Payment Url	Leave **empty** unless BRED gives you a special payment-page address

3. Click **Save**. Then switch the BRED Bank gateway **on**.
4. Ask **Mark** to run the first TEST payment (use BRED's test cards). Do **not** make BRED the default for guests yet.

> The **Notification URL for BRED** is shown at the top of this same Configure window, with a **Copy** button. If BRED asks for it again at any point, copy it from there.

Later, when BRED issues the production key: open Configure again → set **Mode** to **PRODUCTION** → paste the **Production Key** → Save. Mark will confirm the first live payment.

---

5. Two messages you can copy

5.1 Send to BRED (Michael Dan)

> **Subject:** PayZen shop configuration — Ace Tours & Transfers
>
> Hi Michael,
>
> To finish the PayZen shop setup for Ace Tours & Transfers, please configure the following for **both the TEST and PRODUCTION shops**:
>
> - **Instant Payment Notification (IPN) URL** — use the same address for both: `https://acetoursvanuatu.com/api/payments/webhook/bred-bank`
> - **Notification for cancelled and abandoned payments:** please turn this on as well, sent to the same address, so our website is told when a customer leaves the payment page without paying
> - **Signature algorithm:** HMAC-SHA-256
> - **Currency:** VUV (whole vatu — VT 5,000 is sent as `5000`, no cents)
> - **Capture:** same-day automatic; **3-D Secure** enabled
>
> Please also send us the **8-digit Shop ID**, confirm the **TEST key** is visible in the Back Office, and let us know how the **PRODUCTION key** is issued.
>
> Our technical contact for the website integration is **Mark** — `markmal64@gmail.com`.
>
> Thank you,
> Savi
> Ace Tours & Transfers

5.2 If BRED asks you something technical

Forward their email to **Mark** (`markmal64@gmail.com`) and say: *"BRED asked this — can you reply?"*
Do not guess an answer, and do not send production keys, passwords or website files by email.

---

6. Security rules — please follow

- **Never email, WhatsApp or text the PRODUCTION key.** Type or paste it yourself in Admin → Payments. The TEST key is also private; share it only with Mark.
- **Do not send website files or GitHub access to the bank.** The integration is already built and deployed; BRED needs only the settings in §2.
- **The Back Office login is for shop settings**, not for the website. Use separate users for you and Mark.
- **No card numbers** are ever stored on our website — customers enter them on PayZen's page.
- Payment credentials are stored encrypted on the server; the daily admin account is separate.

---

7. Where the technical detail is

Document	Who it is for
Technical overview	BRED's and Global Bedbank's technical reviewers
Go-live runbook	The full operator/developer go-live runbook, including the 13-point checklist
Sandbox testing guide	Field-level TEST-mode reference
Security and handover	Security and safe-access rules

Questions? Ask Mark — `markmal64@gmail.com`.
